About the Author

CHAPTER ONE

Introduction to YouTube

YouTube was formerly owned and controlled by three (3) Americans, who pulled resources together to create what is today identified as the most visited website in the world. YouTube was primarily intended as a platform for sharing videos online. YouTube had its headquarters based in California. An online payment platform – called PayPal- which existed before YouTube was the one that initially bred YouTube, when three employees from PayPal firm decided to do things on their own and created an online platform for sharing videos. The names of these three men include; **Jawed Karim, Chad Hurley and Steve Chen**. YouTube was launched on February 14, 2005 – on the eve of Valentine’s Day. These three young men decided to sell their newly found website, almost a year after its creation. They sold the website to Google in November 2006, one year and eight months after the website’s first appearance. Google bought the site for exactly 1.65 billion United States Dollars. As at the moment, Google is the one currently operating YouTube as one of its subsidiaries. Let us consider some earlier and later milestones of YouTube as the pioneer online video sharing website.

Early and late appearance

Hurley, one of the pioneer founders of YouTube, said in one of his interviews that the brain behind their invention was as a result of their thirst to replicate a video version of an online dating website. In the early days of the year 2000, there were difficulties in finding a dating website that is in video format. The first YouTube video was titled ‘*Me at the zoo*’ and was uploaded on YouTube on April 23, 2005. In November 2005, the company ‘**Nike**’ decided to use the then football legend, Ronaldinho, to advertise their product. The video was the first to reach one million views. Google obtained the license to operate YouTube officially after paying a huge sum of money in 2006. In 2010, the YouTube operators observed that YouTube was not user-friendly enough. They then decided to launch a new design interface that seemed appealing to customers. This, in their bid, to attract viewers and increase the time spent by viewers online.

In 2010, a market research company with www.comscore.com as domain, published some data that identified YouTube as the dominant provider of

online video content in the US with more than 14 billion video views. As of December 2016, YouTube became the second most visited website in the world, garnering more than 15 billion video views per month. The domain of YouTube is www.YouTube.com. This name used to be mistaken for www.utube.com, owned by Universal Tube and Rollform equipment. In November 2006, the Universal Tube and Rollform equipment changed their domain to www.utubeonline.com to avoid confusion, not after some paper works and protocols anyways.

In October 2010, **Hurley** stepped down as Google appointed CEO to allow **Salar Kamangar** take over the reign of leadership. In November 2011, one of Google Interfaces – Chrome browser- was integrated directly with YouTube. This is to enable users to watch and stream videos from Chrome browsers. In fact, as at the moment, you can actually stream YouTube content from virtually all browsers. All thanks to the advancement in Internet knowledge.

Accessibility

YouTube is accessible worldwide, but there are few countries in the world where access to YouTube has been totally blocked. These countries include **China, Iran, North Korea, Sudan, South Sudan, Eritrea and Turkmenistan**. That means if you are living in any of these countries, your chance of getting access to YouTube is zero for now. There are also some countries in the world where access is not totally denied but only restricted. Such countries include; **Russia, Tunisia, Turkey, Venezuela, Pakistan, Armenia, Finland, Indonesia, Brazil, UAE, Germany, Bangladesh, Afghanistan, and Libya**. The reasons behind some countries restricting YouTube access is different from country to country, but some reasons are associated with; Preventing their Youths from accessing illicit content videos, Copyright and intellectual property protection, preventing unnecessary criticism of the government amidst many other reasons. As an individual, you don't need to register before you use YouTube to watch interesting videos. Registration is only important should you require to upload your own video and create your own playlist.

Notable events and transitioning within the last
decades

In the early weeks of February 2014, **Salar** left YouTube as the CEO. **Salar** was succeeded by **Susan Wojcicki**. **Susan Wojcicki** is the current CEO of the largest video streaming platform in the world. In a bid to provide age-appropriate content for children, YouTube in February 2015 launched a mobile app known as *YouTube Kids*. YouTube was packed with a parental control feature, carefully selected channels and a user-friendly interface. YouTube Kids is to ensure Children's activities on YouTube are restricted and duly monitored by their parents. The later months of 2015 saw YouTube launched *YouTube gaming* and *YouTube Red*. YouTube gaming was a video game platform and the YouTube Red was meant as a means by which users can bypass some boring ads when streaming videos. On May 17, 2018, YouTube renamed the YouTube red to YouTube premium, and the accessibility was increased to a few other member European countries. In November 2019, YouTube announced its move to create the 'creator studio classic'. The creator studio classic is currently being developed and the exact date of launching is still debatable and vague. The early 2020 saw the world waking up to the news of coronavirus pandemic, and YouTube made known of their move to reduce their bandwidth to enable more people to stream more videos while staying at home. In their word 'We will continue to work closely with governments and network companies across the world to do our parts to minimize stress on the system during this trying time', YouTube announced.

Features of YouTube

Some of the features of the YouTube platform are highlighted below;

- **Technology adopted to run YouTube:** YouTube is currently adopting the *Dynamic Adaptive Streaming* over the conventional HTTP protocol. Not long after the unveiling of this recent technology, YouTube started making their videos in **AV1** format. The AV1 video format is so clear that you will be looking at the video with the desire to take the actors out of the TV.
- **Adobe Flash plug-in:** In the early days of YouTube, you cannot watch videos without installing the adobe flash player on your computer. The adobe flash player enables one to see animated content. In January 2010, YouTube launched a built-in web browser that supports the HTML5 standard. This feature will enable you to watch videos without necessarily installing the adobe flash player. With the

HTML5 trial, only browsers that support MP4 or WebM can actually play most of the videos on YouTube.

- **Uploading:** Over the years, YouTube has morphed itself while varying the video length, numbers and quality you can upload on their website. As at 2005, users have the grace of uploading videos longer than 10 minutes in length. But over time, this privilege was abused by recalcitrant users and by March 2006, YouTube reduced the video length to 10 minutes at a time. In July 2010, YouTube increased their video length to 15minutes. As at the moment, YouTube allows compliant users to upload videos totaling 12hours at a stretch. The maximum size of videos you can upload at a stretch is currently pegged at 128GB in size. Currently, YouTube supports videos uploaded in formats such as AVI, MP4, MPEG-PS, QUICKTIME, FLV and 3GP. The 3GP has low quality and is not as clear as the other formats. YouTube also allows you to upload videos from your mobile phone. The Android OS and the ios are known, especially, to be very good for such uploading activities.

- **Quality and format:** In 2007, YouTube made the 3GP video format possible. This enabled users to watch videos on their mobile phones and at the comfort of their room. A year after, YouTube introduced a high-quality format - higher than the 3GP - called the MP4, which had resolutions around 480x360 pixels. With this resolution, you can watch videos with very clear brightness and resolutions. YouTube added the 720p HD mode in 2008 and subsequently launched the 1080p HD in 2009. The 4K video format was unveiled by YouTube in 2010 with a resolution of around 4096x3072 pixels. In June 2015, the 8K video format was launched. YouTube videos are in a range of quality levels, with the High definition (HD) being the highest. The high quality (HQ) is in-between the standard quality (SQ) and the HD (high definition).

- **YouTube Annotations:** Annotations, in the form of pop-ups and hyperlinks, can be added to YouTube videos. The annotations are a means of providing interactive video sessions between users. The complaints by users had made YouTube remove the annotations option as some users found it uninteresting.

- **Skippable ads:** YouTube recently announced that it's rolling out

skippable ads. This feature will enable viewers to skip ads they don't want to see after 6 seconds.

- **Improved comments:** To get a clean view of the YouTube web page, there is a limit to the kind of comments users can make in the comment section. The YouTube web now comes with a system specifically designed to limit the appearance and visibility of junk comments to achieve a cleaner layout.

- **Subscriber notifications:** There is a new feature on the YouTube platform that creators of content can easily deploy to let loyal followers stay abreast of their new video and updates. Followers can receive notification in their mail and phone number notifying them of new updates from their favorite YouTuber.

- **On the go video management:** Effective management of your video on YouTube is essential to maintaining a healthy follower base. You can effectively control and manage your product on YouTube anywhere you are.

- **360-degree Videos:** The 360-degree feature recently added can enable viewers to see everything happening within the jurisdiction the video has been shot.

YouTube as the only income source that is still relevant

Over the years, there have been many online video editing and uploading platforms. But the place of YouTube, being the early pioneer in the industry, cannot be undermined. YouTube has edged itself at the top and has been able to pass the test of time through its series of developmental changes to adapt to the ever growing trends and demand. YouTube boasts of over 2 billion logged-in users every month with over a billion views every day, which places it as the most visited website in the world. With these statistics, it will be difficult to not reckon with the ever-growing dynamics which YouTube is setting among its peers.

With the growing technology being deployed to make videos, millions of content creators have found their ways into YouTube web. These content creators make a lot of money monthly, ranging from a couple of thousands to millions of dollars. There are many YouTubers on YouTube platforms whose

source of income is solely through YouTube. Do you still think YouTube is overhyped? Of course not. YouTube has more swags than meets the eye.

Nowadays, it is becoming exceptionally very easy to create nice content that can wow the viewers and thereby generate more views, which translates to money. The more the viewers, the more often you smile to banks. With YouTube incorporated ads, you can run multiple ads on your videos. Companies contract famous YouTubers with a large follower count to help them advertise their brands in their videos. Do you think it is free of charge? No, they pay in dollars. The amount of money YouTube pays YouTubers actually depends on the video length and the number of views their post garnered. It is worthy of reinstating that YouTube doesn't pay based on the number of subscribers you have on your channel. But your subscribers can help you increase the number of views you have on your post, which is an integral part of how you get more money.

According to Forbes 2019 report, **Ryan Kaji**, a kid YouTuber was the highest-paid YouTuber in 2019 with an earning of \$26million. **Ryan Kaji** is an 8years old who creates kid's gaming content on YouTube. Almost 16years after its first appearance, YouTube has been consistent in giving people joy, when almost everyone with the right skill and device can upload useful content to gather views and money.

In the subsequent chapters, we'll give you a full-ride towards making your own money on YouTube. This eBook is the only sauce it takes to teach you the necessary things needed to ensure you have the right materials to set up your own YouTube channel. There are chapters upon chapters inside this eBook that will answer your long held questions you might have had concerning YouTube and its content.

CHAPTER TWO

Getting Started

Required tools for starting A YouTube channel.

YouTube has morphed itself into becoming one of the biggest and hottest platforms for sharing video content online. It's an avenue for individuals to showcase their ability, create some further money and promote themselves and their business and doubtless become a cyber celebrity.

When making a video, one amongst the very most important things you would need to contemplate is the instrumentation - at least never have we heard of a farmer going to farm without his tools. In line with YouTube statistics, nearly five billion videos area units are being watched on Youtube every single day. Also, three hundred hours of video area unit uploaded to YouTube each minute! That's quite huge, you'd say. So as for you to face out, you'll want some instrumentation to try and do that.

Having said that, making quality videos is one thing you should never compromise for anything. You do not necessarily need to have tons of technical power to provide the type of content that individuals would relish watching — you merely need the proper instrumentation. However, as a beginner, it is best to place some efforts into the visual quality of your videos to confirm that you simply have views and gain subscribers.

The following area unit the equipment/tools in making a top-quality YouTube video;

- Camera
- Microphone
- Tripod
- Lighting
- Video piece of writing computer code

Camera

One very essential equipment to have is the camera. But before you go to the market, you should know that you need not purchase the most expensive camera. You'd probably need a camera that can record high-quality video

(1080p). While there are a number of cameras, quality webcams or camcorders would do when you are just starting out. Mirrorless and DSLRs are good shots when you need to upgrade from a beginner to a professional.

Note: The type of camera you should buy would depend on the type of YouTube content you are creating. Here are the available types you can consider;

- Camcorder
- Webcam
- Action camera
- DSLR

Camcorder

These are definitely great options for creating YouTube content due to its simplicity and are designed specifically for shooting videos. In the same vein, the most recent camcorders are light weighted, compact and affordable. You can use them when you are filming a video at home or on-the-go.

There is the *Sony HDRCX405*, which you might probably want to try out, a full HD camera with an image stability feature to reduce shaking when shooting. To its credit, it can shoot high-quality 1800p videos at 60fps and is equipped with a Carl Zeiss zoom lens with 27x true optical zoom for lossless magnification and overall video quality.

Webcams

Webcams are the best option for those who want an affordable, plug-and-play video camera. It's a good choice for people who need to record in front of

their computers. An advantage of a webcam is that it makes live streaming easier since they can be directly connected to the computer.

While there are surveys of webcams, you would want to consider *Logitech C920 HD pro*. It features full HD 1080p and 720p video recording. It should be an option for those who want to record while playing games on their computer. If you need something that *can pan and tilt*, Logitech webcam is the best suit.

Action Camera

These are the most robust camera types. They are best incorporated for photographers and videographers who explore sports ventures. Though they are small in size and shape, they can produce the extremely best video quality. One of its advantages is that it's durable.

For beginners, you may want to consider the most recent *Gopro Hero6*, which has the capacity to record 4k videos at 60fps. To its credit, it has a touch screen display, integrated voice control and waterproof.

DSLR

These categories of cameras are used for video production due to their high-quality results. They have the advantage of adopting low light intensity and polished video recordings. You should invest in DSLRs if you take videography seriously.

A typical DSLR for making good YouTube videos is the *Canon Eos Rebel T5i*. It is suitable for beginners and expert YouTube content creators. It can record 1800p video, and support for continuous tracking.

Microphone

As soon as you lay your hands on a good camera, it's equally pertinent to get equipment that produces audio-quality that blend the quality of your video. A bad audio quality is a bore for viewers. It's not advisable to use a laptop or camera microphone as they can't record or eliminate apparently low sound quality. This would warrant the need to get a good microphone. Below at some of the good ones you can consider;

- Condenser microphone
- Shotgun microphone
- Lapel microphone
- USB microphone

Condenser microphone

A great USB microphone is the *Audio-Technica AT2020USB plus*. An advantage of this microphone type is that it allows for self-monitoring through its built-in headphone jack with volume control. It also allows for mix control as you can blend your microphone audio with a pre-recorded sound. The AT2020USB has a high-frequency response that makes it ideal for recording home recordings and podcasts.

Shotgun Microphone

These are popular high-quality options for video recording with a small professional camera. It has a shock mount that reduces mechanical vibrations around the microphone. It has the ability to capture clear sounds and vocals directly in front of it. It doesn't pick ambient sounds. You would want to consider the *Rode Microphone VideoMic pro*. It has a super-cardioid polar pattern system and is powered by 9V batteries.

Lapel Microphone

This is a wireless microphone that can be clipped unto the cloth or belt. It's incorporated with a transmitter that connects the lapel and the receiver. The receiver can pick signals from the transmitter at far distances. The commonly used is the *Rodelink Digital Wireless System*. It has up to 8 inches for mounting on a tripod and a clip for belt and clothing.

USB Microphone

These have gone from being unpopular now to a popular microphone for YouTube. USB microphones have an edge due to their usage flexibility and quality of sound. They are equally affordable. The *Logitech ClearChat H390* is used as a headset for YouTube videos. It's very easy to use and provide quality and clear audio.

Tripod

These are very affordable and various types exist. The one you would want to consider would depend considerably on the weight of your camera. It's

mostly common to invest in a sturdier. It has the advantage of protecting the safety of your camera. Here, you would want to consider the *iKan E-image GA752*. It's a great tripod that can handle both DSLRs and camcorders.

Lighting

Lighting equipment is very pertinent, especially when you are shooting indoors and in dim areas. Areas of ambient light also use this as a source of illumination. Lighting can change the mood of your set up. While there are surveys of them, here are very good types;

Soft Box

This can stand-in for the natural lighting from a window. This can't be dissociated from the white diffusion panel that regulates the intensity of direct light. A good example here is the *Flashpoint SoftBox*, which comes with a number of features. They can be used with digital cameras and are great a deal for indoor subject features.

Ring light

This is such that when its ring shape emits light all over a subject, it removes shadows from every direction. This allows everybody to look more attractive on the camera. Here, you would like to consider the *Flashpoint 19 kit* due to its benefits. It has 80W power that doesn't enjoy too much heat and is easy to carry.

On Camera lighting

Here, continuous lighting can be erected on a camera. It is a great option for recording certain types of videos, such as wedding videos and documentaries. It's also suitable for YouTube content involving people. Here, you would want to consider the *ikan iLED-MA Micro Flood Light*. It has got a number of features. It's a good option for indoor shooting, the ability to emit a wide beam of light, chargeable with a Micro USB cable.

Video Editing Software

Having got all the needed equipment above, there is a need for a video editing software for post-execution. It's important to note here that YouTube has its video editor, but having your software would give you more flexibility in editing to your taste. You might want to check out *Adobe premiere*

Element 18. It's a good option.

Identifying your YouTube video niche

Your YouTube niche is what describes your channel. Identifying your YouTube niche entails finding out what you know best to do, and then monetizing it if it is money you desire. But you have to be really good at creating creative contents to discuss your passion on YouTube. You may be more interested in food (food niche), science (science niche), animals (animal documentaries), etc.

Why niching?

Well, there are many channels on YouTube with similar or almost similar content, so carving out your niche to make a difference is the deal. You don't want to build a channel that already has about 1million people doing the same thing everyday. This kind of competition is not necessary. To prevent your work from packing in the shadow of others, you have to creatively carve out a niche that is different from what has been otherwise available.

Tune your niche down to a particular field: you can't afford to have a niche on health care, and at the same time, be the same person spearheading a niche on gaming on your YouTube space. This can confuse your subscribers. They want your best output tailored along the line of what you have been giving them on your channel - not an entirely different one you are not so good at.

Finding your niche boils down essentially to what you want and what you know best to do. Are you aiming to get people aware of some products? Is it money you are interested in? Is it to build popularity? To solve this, you have to consider;

- **What fuels your desire:** No one do something just for the sake of it. You must have your reason for setting up a channel. You have to align that passion and blend it to give you a desirable result. Your passion might be on food, drugs, animals, gadgets, etc.
- **What are you good at:** It doesn't sound so well that you're an accomplished medical doctor, but you're building a YouTube channel on technology. Why can't you carve your channel specifically about health since you're good at it?
- **Audience preference:** You must, as much as, consider the need of

the predominant audience on YouTube. If your subscribers are older people and you have a niche on toys, I'd advise you to switch preference.

Picking a YouTube video idea

Different things interest different people at different times. Picking a YouTube video idea lies in your ability to read your audience, know what they want and the right way to address it. You might want to anchor your YouTube video idea on any of the following;

- Educational YouTube video idea: Explore scientific concepts, make mathematics tutorials, discuss business ideas, discuss plant and animal habitats, history of different countries etc.
- Technology Youtube video: Discuss computers, hardware and software, explain some tech concepts etc.
- Gaming: Teach your audience to play different games. Sometimes, live gaming sessions.
- Fashion and comedy.
- Your general idea might include; making a challenge video, favorite TV show, showing off your newly bought assets, do a product review.
- Gaming: review a game, compare two most talked-about footballers, and even discuss games that are yet to be released.

How to shoot a video for YouTube

You can actually have the best shot with the right professional editor, right camera and a superb finishing touch. These steps are easier to shoot a quality Video;

- Select the right equipment: Do you prefer a simple and cheap camera you can operate easily or a very expensive one you can't easily get your way around? Know what you want and invest in it accordingly.
- Invest in a good camera and microphone: The quality of your video actually depends on the right choice of camera and microphone. If your camera does a blurred job, then your video won't come out well. The same applies to a microphone.
- Get some lighting: A dark room won't be convenient for shooting your video because there's no illumination. You need to set your

camera to be able to absorb light for proper illumination perfectly.

- Have the necessary video editing software ready: invest in good editing software that can give you that perfect job you need.
- Choose the right background for your video.
- Place your camera appropriately.
- Ensured a quiet filming location.
- Know your audience and what they want.
- The purpose and subject of your video must be properly addressed.

Which is better between 4k shot and 1080p shot

Horrible looking videos are boring to viewers. If you want your video to be of high quality, you really have to make some investments in good cameras and microphones. 4k is known as ultra high definition video (UHD), while 1080p is known simply as high definition. 4k has a higher resolution than 1080p. 4k resolution is 3840×2160pixels while 1080p is 1920×1080pixels.

Why 4k over 1080p?

4k technology is able to project extra fine details than 1080p. You can see very tiny details on your screen as if the texts were actually bigger than that.

CHAPTER THREE

Editing Your Videos

Best editing YouTube videos software

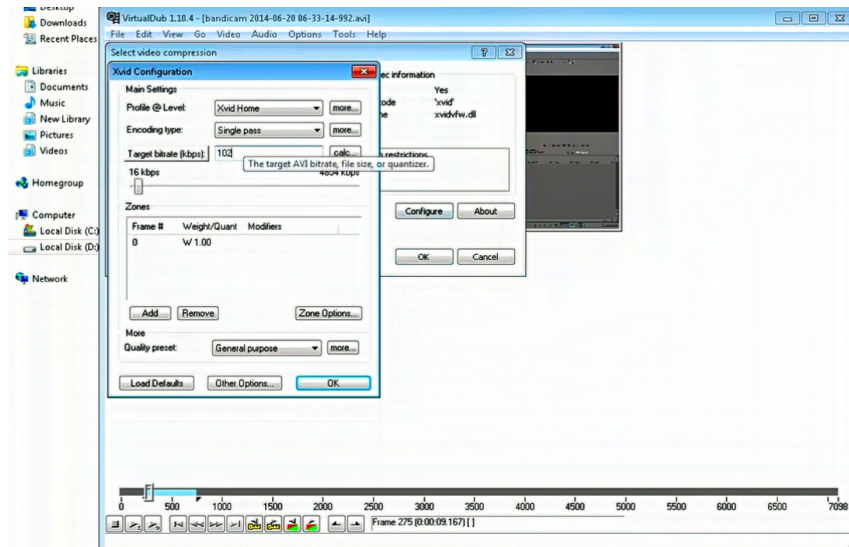

One thing that can give you an edge as YouTube content creator is a top-notch video upload - free of junks and unnecessary materials. How then do you ensure you give your video the right shot at impressive content? How do you give your viewers a nice video and keep them glued to your channel? No mixed feelings, I have had friends tell me they love some particular YouTubers more than another. What do you think is at play here? Yes, your guess is as good as mine. The right video editing can give you an edge over others in the YouTube market space.

Something worth noting here is the fact that some YouTubers prefer not to edit their videos themselves. What they do is hire a professional video editor to help them do the best job. This gives the YouTuber ample time to come up with other necessary parts of the video to give quality content. Video editors are professional and do not edit videos for the fun of it. They get paid for doing what they do. An average YouTube video editor, on the average, gets about \$20 per hourly basis for their job. Well, as it is obvious, the only ones not getting paid on YouTube are the viewers.

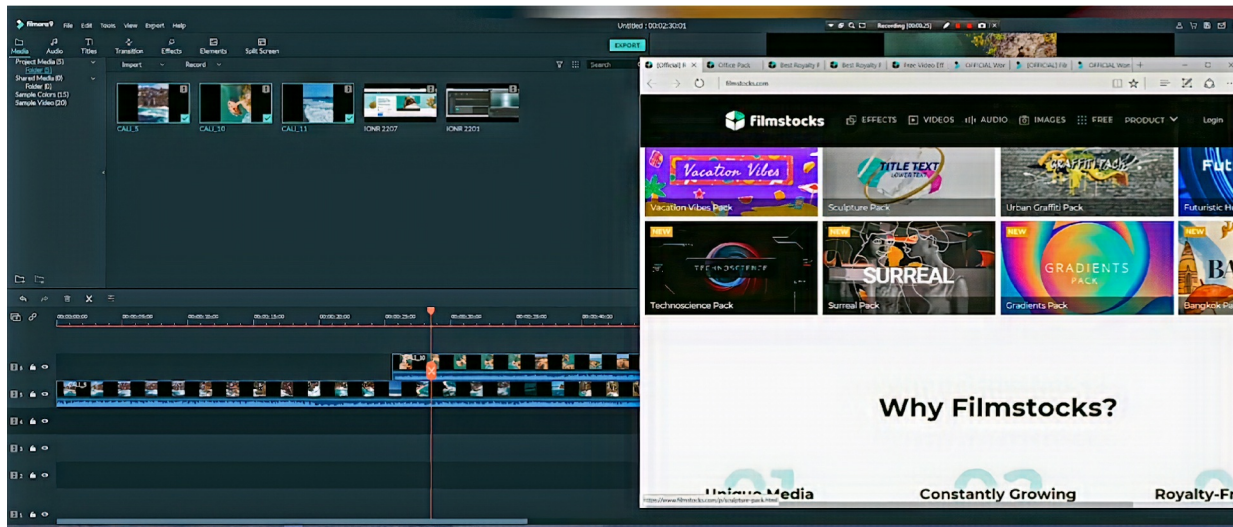

In this concise eBook, I'll take you through some of the best YouTube video editing tools and the right ways of using them. There are two levels; video editing for beginners and video editing for professionals. These two levels will find these tools, especially very useful. Some of the best YouTube video editing tools are highlighted below;

VirtualDub: This YouTube video editing application is primarily for beginners. Advanced users have gotten beyond this level of editing with the advent of more sophisticated tools year in year out. VirtualDub, although has become obsolete as of recent, was released in early 2000. When YouTube came into the picture in 2005, video editing became increasingly necessary. What other video editing software can be best deployed for this online video platform? This software was primarily designed for trimming, cutting and resizing of videos only in AVI format. Editing other video formats, not in AVI might seem difficult, though users with the right skill set still bypass this

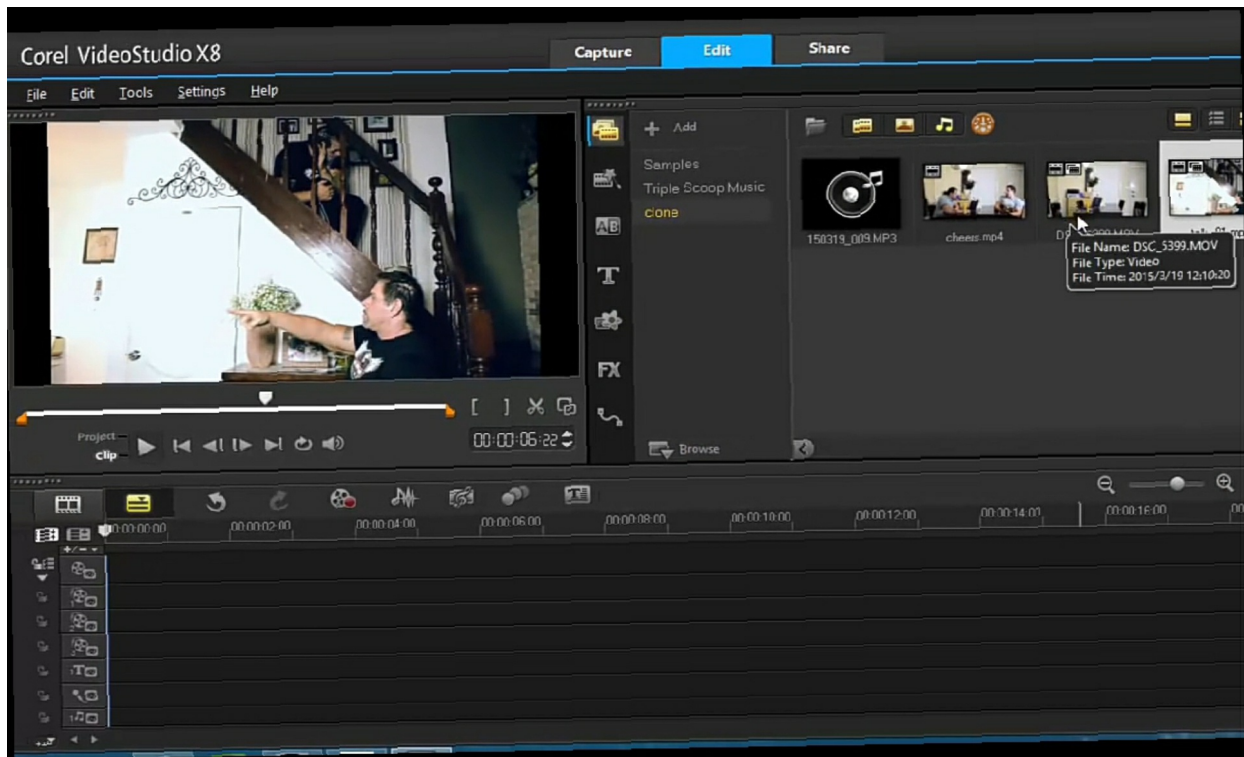

restriction. VirtualDub works best on PC with operating systems such as Mac, Linux and Windows. One very noticeable cons of this software is its inability to perform advanced editing.

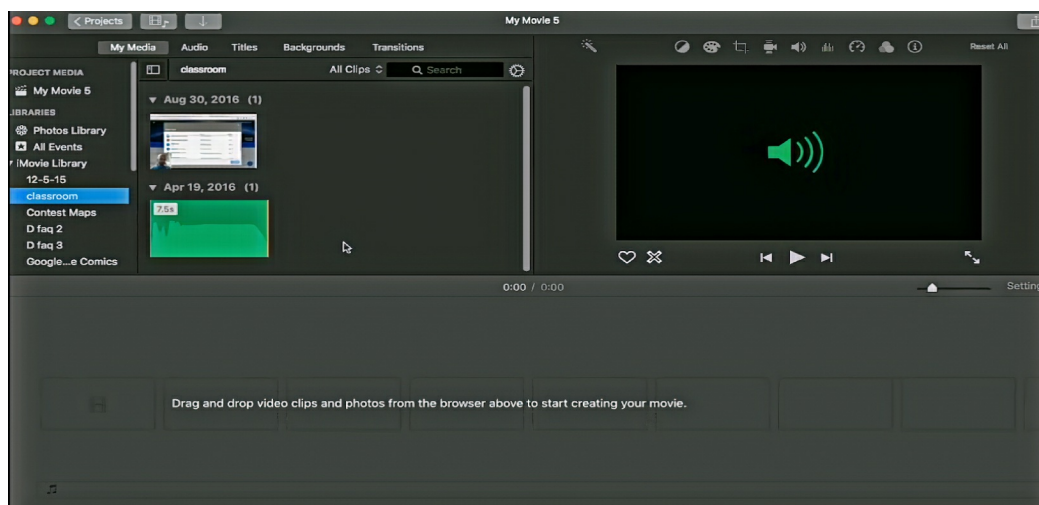

Filmora9: With the advancement in technology, video editing has become almost like a walk in the park for people who are interested in it. Filmora9 packed in; a perfect video editing feature, stunning effect and excellent color grading. This wonderful software also enables you to perform some advanced editing video features, such as de-noising, Tilt-shifting, Green screen, video stabilization and color enhancement. You can, in fact, add texts and emoji. The split-screen feature enables you to make creative videos and offer you some forms of flexibility. This software is compatible with video formats like MP4, MKV, FLV and a host of others. One con is the watermark feature, which some users found particularly annoying. The watermark feature can be removed, but you have to pay to remove it.

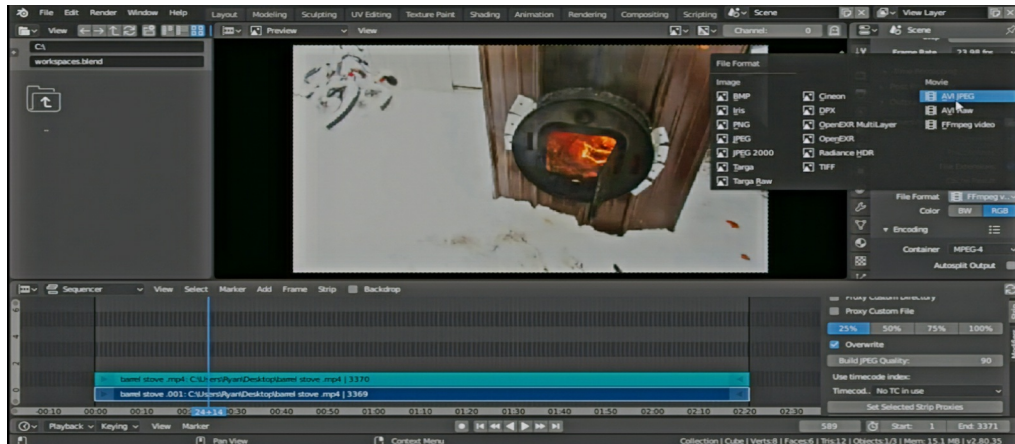

Corel VideoStudio: With this software, you can crop and resize your videos. It also comes with a 4-angle multi-camera video editor to give you all the fine-tuning you might need. The lens correction tool and the stop motion animation are also present to give your video the required appeals to wow viewers. With this software, you can export your video directly from the app straight into YouTube platform. This saves time since you don't need to save your video on any other application before you take it to YouTube. This particular editing software is not suitable for beginners. So if you are a beginner editor, I will advise you to look for other video editing apps. The app is not free and you have to pay some fees before you procure it.

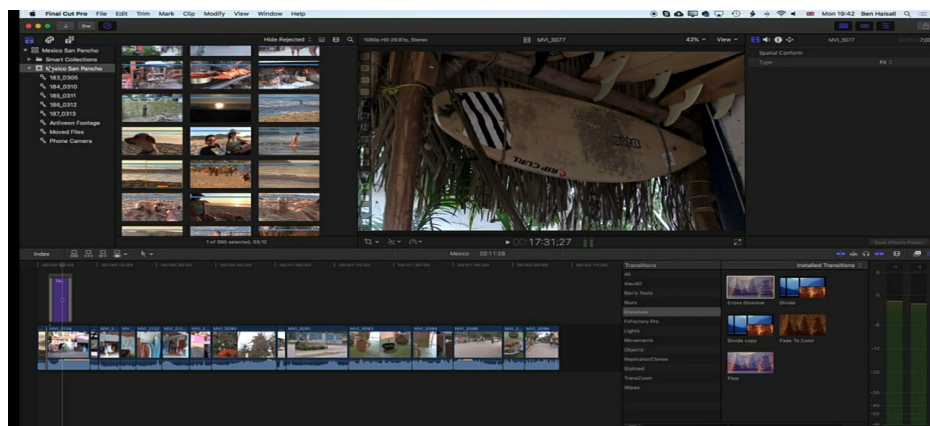

iMovie: This is a free video editing package and you don't need to pay any amount before using it. You can add titles, visual effects audio enhancement to your video for free. It is for beginners. The software offers basic video editing features, such as cropping, trimming and arranging the video in any way the user deems fit. The 2003 and other latest models of the software allow video in 4k and HD format. Though this software is loaded with a lot of impressive features, professional editors often prefer other video editing apps that are more sophisticated. Your video can have music playing in the background with this software. It is only available on Mac and iOS.

Blender: This video editing software is free and you don't need to pay before you use it. It provides improved gaming and animation features. Video rendering is also effective with this software. Though it does not really offer much edit features, but nice features such as histogram displays, live preview and trimming are especially prominent on the app. It allows you to mix your audio to your taste. Available on Linux, Mac and Windows. Some video editors commented under the app's impression that they usually find it difficult to use.

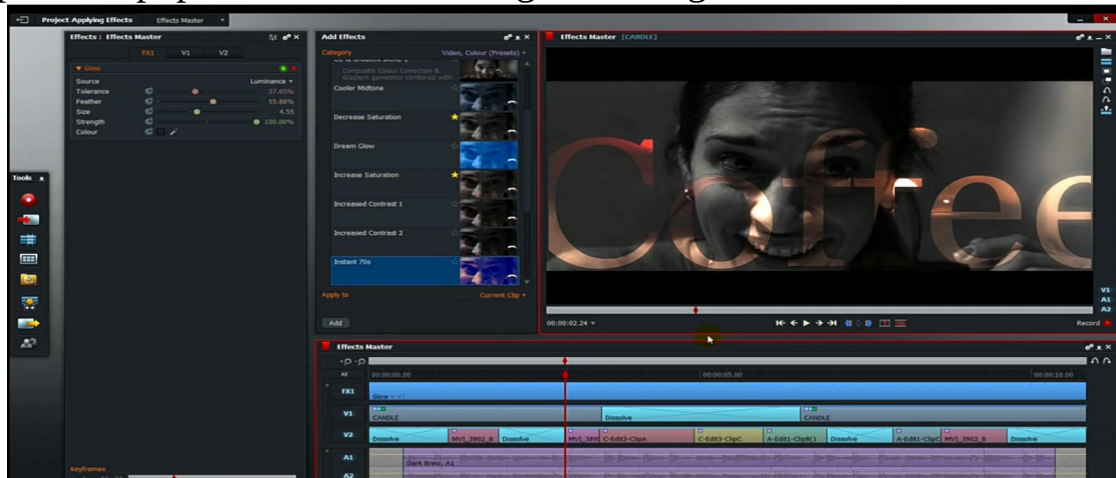

Final cut pro: According to some of the best YouTube video editors, this software is one of the best of its kind to ever grace the market. It provides a high-quality video editing package. You can practically work with larger volume of video, audio and images. Your video can come out in 4k and 5k when you use the latest version. It is not free and you have to pay a considerable amount of money to procure it. But once you get it at your disposal, it feels like the next best thing after heaven. It is available only on Mac OS.

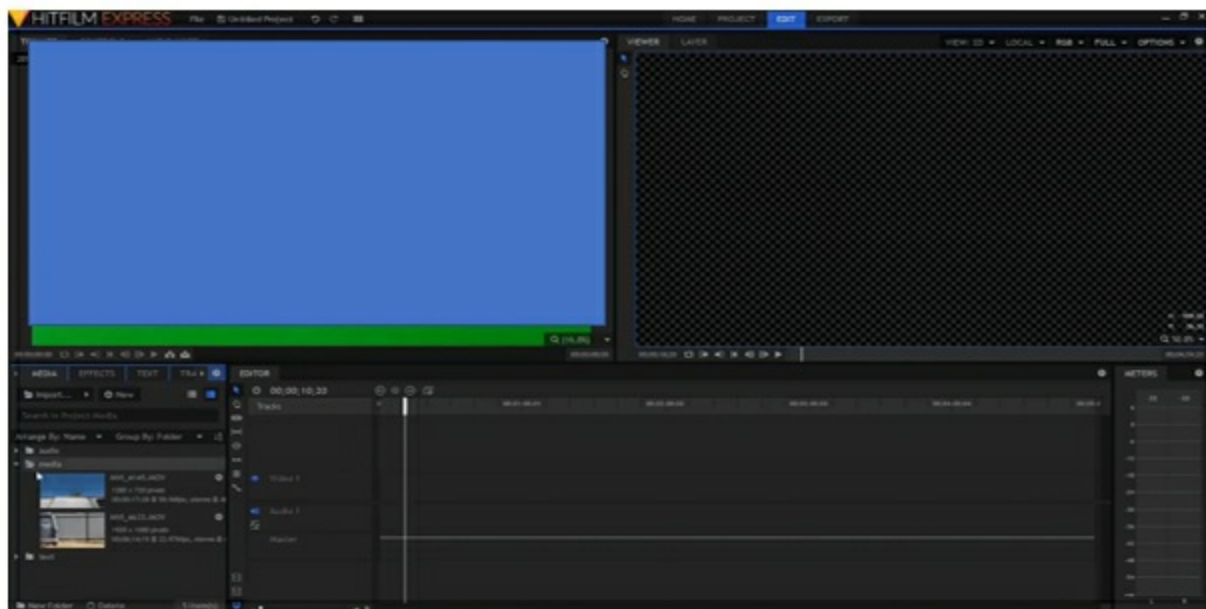

Lightwork: Particularly useful for making high-end movies. Equipped with a

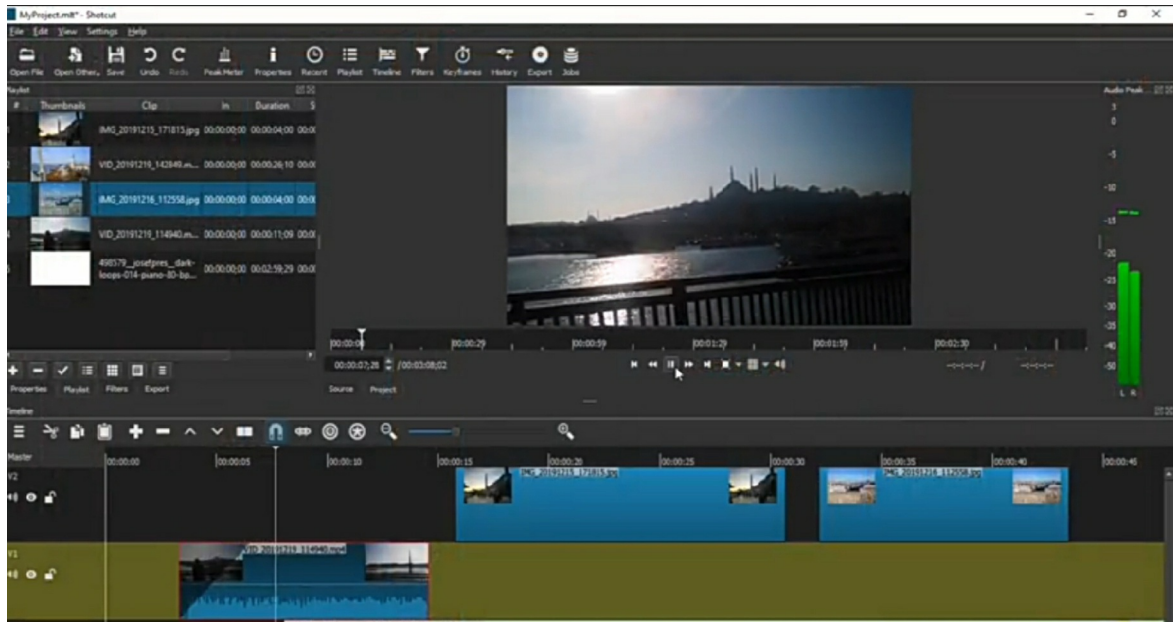

perfect choice of visual effect, multicam option and video trimming. It supports all popular video formatting, including the 4k format.

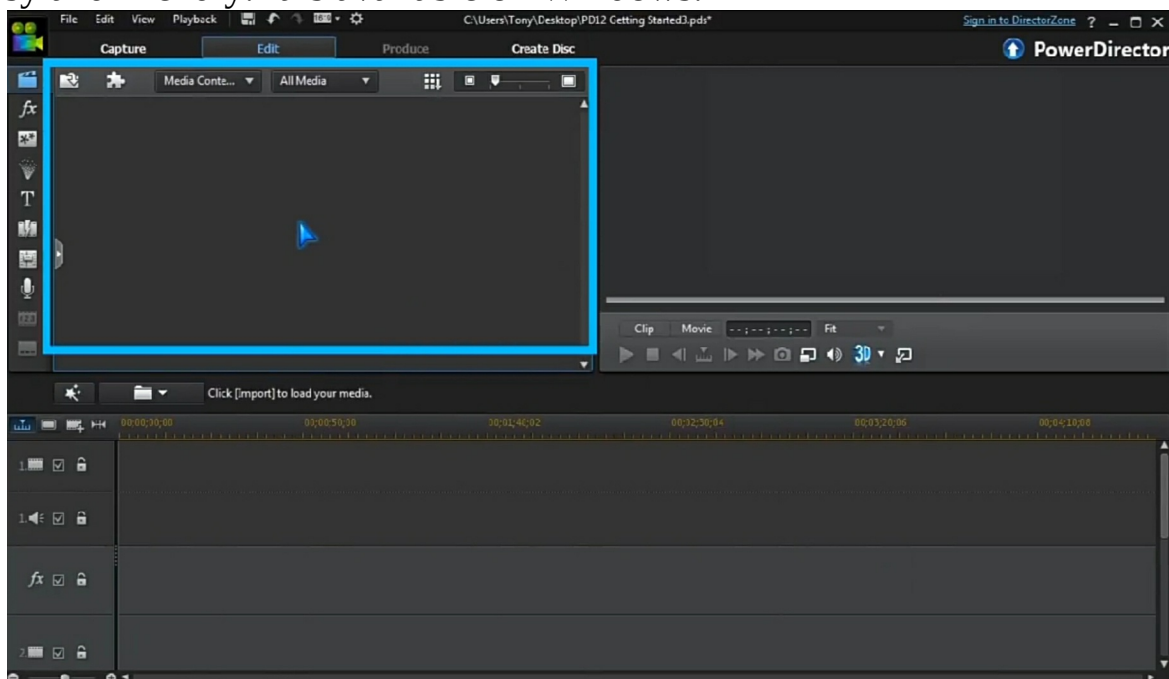

Hitfilm Express: There's a free version available for this, only that the amount of editing you can have on the free version is limited. It is user friendly and can edit in 4k video format. It is available on Windows and Mac OS.

Shortcut: Available on Mac, Linux and window. It offers graded tutorials about new products that users can benefit from.

Cyberlink power director 365: If you are the type that likes using your smartphones for almost everything, then this video editing software is for you. It has an Android version that users can take advantage of since it is easy and friendly. It is available on Windows.

Easy tips and tricks to make your video editing seems effortless and efficient

Nothing beats the joy we get from seeing that our small efforts come up with

a bigger and better result. That said, getting your hands on some high-end YouTube editing video software is not enough. Every part of the video edit must resonate and blend perfectly with each other. Having the necessary basic tips and tricks can go a long way towards making your job easier and perfect. Nobody's interested in the story of how much pains you endured before your work comes out as perfect as it is, but everyone is interested in the result. The following tips will be especially useful in your endeavor to create a perfect YouTube video.

Prepare your footage, Video, images and recordings, then organize them into a safe file on your PC: Create a folder on your computer where you can save all your pre-recorded video and audio for easy off-loading into target editing software. You can't afford to have a messy work table where everything is in disorder. This is why a project directory is important to give you a good shot at arranging your works in an orderly manner. It is necessary to have a backup for all your files stored on your computer in case of any damages to your computer.

Choose the right software for your editing: There are many video editing apps out there. And the right choice is necessary to give your work the perfect order and fineness. We all have choices we make just because they work for us better. Choose a good software that you can perfectly operate without any difficulty. In the end, what matters is a quality video output. It is equally pertinent, especially, to use a very fast computer with a powerful RAM. A powerful RAM is indicative of how fast your commute is, as some editing requires a strong computer.

Trim and cut the unnecessary part of the video: People are not interested in how you went to the ATM to withdraw cash, when it is clear it is of no use to the theme and essence of the video you are shooting. People are more interested, particularly in the main events and the thrill. Give it to them.

Avoid jumpcuts as much as you can: Your video must come out just as if the speakers there are perfectionists who speak without mistakes. Your viewers are not necessarily interested in seeing all the errors in your video, so don't let them see it.

Blend your sounds perfectly into the video: For good sound effects, your camera might not do the magic. You can use a microphone that can be connected to the camera for a proper sound mixture.

Edit for a story: Your story must be perfectly coordinated. Create a powerful blend of stories mixed with creativity, technicality and sometimes necessary humor. You just must be able to tell the story, albeit convincingly.

Vary your video projection angle at intervals: You don't want a video where only one angle is maintained throughout. Changing the angle of shot at intervals is equally important to have some perfect blends.

Add texts and graphics when necessary: Texts can be embedded in the video. Sometimes, you may have some important information you want to pass across to viewers; this is the chance to get that done.

Learn terms used in videography: There are some coded terms used in videography, which you must be familiar with some of them, if not all. Some of these terms include but not limited to;

- J-cut: Hearing audio first before the audience sees the source of the sound.
- Split edit: Change over between two shots in a film.
- Jump cut: Discontinuing a shot by leaving out part of the actions.
- Roll: Texts that move top and bottom on the screen.
- Sweetening: Enhancing audio with effects.

Right ways of uploading video on YouTube for massive views

Getting your video out there on YouTube might seem simple, but you as well need to be careful so that you don't get it wrong. The steps below will give you the idea on how to upload your video to get impressive views.

Identify the YouTube video category first: YouTube gives you a chance to upload your video and tag them as you want. YouTube video can either be one of public, unlisted, private or scheduled. A public video can be viewed by users just immediately you upload it because you made it so. Viewers with your link can have access to your video you tagged as unlisted. Specific people that you invited can actually access and watch a private video on your channel. Scheduled videos give you the chance to set the date and time you want your audience to start viewing the video.

YouTube videos take time to upload, so you have to be really patient. You can't compare the time of upload of a 15mins video with that of a 1hour

video.

Create subtitles for your video: You can hire the service of professionals to help you do this.

Create an engaging video title: The importance of using an engaging title for your videos cannot be overemphasized. Because it also helps to increase the number of people who will view your videos.

Create a thrilling video description. The description usually appears at the bottom of the video and it usually describes your video, albeit briefly. The description also helps YouTube to know where to rank your video.

You can add cards to your video. This usually serves to tell the viewers to watch another video just after completing the present one.

Know that YouTube cannot tell particularly what your video is all about. Create a video captioning to give viewers the idea of what your video is all about. Captioning makes your video searchable and gives viewers the chance to watch your video putting the sounds off.

Do your job well and improve your video search ranking. This is very important to gather more views and traffic on your channel. Essentially, when people type in keywords on YouTube searching for videos within your niche, you want your video to come up at the top of the searched items. To achieve this, you have to study the search pattern of viewers and see what keywords people are interested in. Take those keywords and align them in your video title, subtitles and video description.

CHAPTER FOUR

Secrets to Increase Views and subscribers

Steps to branding on YouTube and building a community

As it is in every other endeavor, branding is an essential ingredient. You want to, as much as, differentiate your brand from other competitors out there. Apple has been consistent, over the years, to give customers the appeal and neatness that get them glued to their products. No wonder some people can not buy any other products other than apple. Most will say it gives them a

sense of belonging and class. That is the power of branding. There are four (4) intricacies of branding;

- Target your audience and satisfy their preferences.
- Organize your product to align with your audience's needs.
- Advertise your brand.
- Be consistent with what you deliver.

Branding on your YouTube is no different from the ways other businesses brand their products, only that it requires certain tips and tricks. Here are tips you can use to create a successful YouTube brand;

- **Carve out your niche:** No doubts; there might be thousands of people doing the same thing you're doing. You must be able to do your research well to know what product can easily catch the attention of many users online. You might want to base your channel on health talks, economics analysis, arts, technology or cryptocurrency. Just ensure that you're consistent with it. You don't want to appear like a jack of all trades and master of none. Choose one that you are best at. Professionalism demands that you must be able to do what you do even in times when you're not conveniently doing it.
- **Analyze the growing trends of current and past YouTubers:** Study the patterns. Cross all the t's and dot all the i's. Study what works for them and the failures equally. Analyze specific areas you think you can improve on to give you some leads.
- **Work out the loopholes:** Give reasons for your audience to want to prefer your channel over many others in your niche. Identify what you can do differently.
- **Figure out the best editing video software:** it might not necessarily be the most expensive tool out there. The most important part is to ensure it is one you can use very well to drive productivity.
- **Be consistent with your content:** You don't necessarily want to have conflicting channel on your YouTube as this can get your audience confused as to who you really are.
- **Tell your stories:** Viewers want to hear your story, make them hooked to your channel with some personal experience when delivering your content.

Creating a catchy YouTube community

In this age and time, the internet has come to stay with people's overwhelming presence in almost all social media space, particularly YouTube. If you still think having a properly engaged YouTube space won't do your business much good, then you've probably not given it a careful thought. People actually have a very limited attention span. Your job is to catch their attention with catchy content within 30seconds of landing on your channel. A successful YouTube community is one with high viewers engagement.

Here are some tips to help you navigate your ways to create a successful YouTube community;

- A catchy first impression should not be underemphasized: Use a perfect customer profile for this purpose. You want people to easily understand what your channel is all about, right? Then an impressive customer profile is essential for you
- Speak their language: You cannot possibly build a great YouTube community speaking French to people who only understand the English language.
- Use channel trailers when necessary: Your content might be a 15minutes video, but a 30seconds trailer might be that little opportunity to attract visitors who only got few seconds to spare. Just make sure the trailer is concise.
- Selectively use annotations: Too many pop-up annotations can bore your audience.
- Set the right playlist: Playlist enables you to break your content into bits.
- Leverage on the comment section to get an idea of what the audience feels about your product.
- Engage YouTube analytics.
- Advertise your content and brands: You can share some of your YouTube videos on your Instagram account. This will increase your YouTube engagement
- Use influencers for advertising your products.
- Use promos to make customers happy.

Secrets to a successful YouTube channel

YouTube, contrary to some people's belief, isn't only a platform to watch

movies and comedies. YouTube has, over time, morphed into one of the best online platforms to watch academic videos. Right in my University days, YouTube bailed me out many times on concepts that were taught in class, which I didn't understand. You can promote your business on YouTube and have customers rushing in only because they've watched the description on your YouTube channels. That means more money into your pocket. According to statistics from YouTube, 100hours of video are being uploaded by users every day. Don't you think it is only expedient you make your channel stand out amidst other competing channels? To create an impressive online relationship with your audience, follow these tested steps;

- Consider what your passions are, what are you best at, how can you align your passion to suit what interested audience want to see and what particularly drive your picked - monetizing it. This is essential to have good exposure and build a good rapport with viewers.
- The number of views and subscribers you have on your platform is important but actually not enough. The number of shares, comments, and likes that you get also go a long way to build a lasting reputation for you. People have trust in a consistent process. Be the one they trust.
- Have a habit of uploading creative and educative videos. They'll know you for that.
- Upload videos that can catch the viewer's attention within the first 2minutes. Nobody wants to waste their time. If your platform is not interesting, you can lose your customers.
- Shortly advertise another product, video, links, businesses, special deals and promos in your clip using a customized thumbnail.
- Consistency is the deal-breaker. In order to have a thriving YouTube community, you really have to show commitment and sincerity of purpose. You want to give your audience the feeling that they'll always find new content anytime they enter your channel. That's consistency and it will get you more engagement than you think.
- Don't take your viewers for granted. Appreciate them and engage them as much as possible. This will keep them coming back for more.

How to grow your channel faster with YouTube analytics

Learning how to leverage on YouTube analytics to boost your channel's attendance is one skill that most people don't know about, simply because it has to do with maneuvering between numbers and facts. Why do you think people trust anything backed up with facts and figure more than the way they trust ones lacking credentials? Well, your guess is as good as mine - numbers don't lie.

YouTube analytics, in a layman sense, can tell you what particular targeted audience clicked on your video, the total number of engagements per video ranging from likes, shares and comments.

YouTube analytics show you the **audience retention rate, the total watch time on your video and the click-through-rate (CTR)** on your video. To find the audience retention rate, simply click the audio retention in your analytics and check for the individual video uploaded.

- Audience retention rate shows you the average view duration and the average percentage of views. Here, you have the idea of whether your video is captivating enough to make the viewers stay glued watching or not. YouTube graphs this for easy analysis and you can verily estimate the high peak and the low peak for your video. The retention graph tells you what areas to improve in your next video to have a subsequent higher retention view, having observed where the spikes have fallen and rise. Also, note that short duration videos will naturally have a longer audience retention view than longer ones. This is because people have a minimal attention span. If your channel is not interesting, they will move to another one.
- Your click-through-rate (CTR) is essentially the percentage (%) of people checking your feeds. A high CTR tells YouTube that you're really engaging your audience in great content and it won't be bad if they can help you advertise your channel by pushing it out to more audience. This results in longer watch time for your videos. You might want to change your thumbnail if you have a consistently low CTR.
- YouTube analytics also show you the age group, genders and class of people your videos are attracting. This will tell you how to adapt the content on your channel to meet the target of the dominant age group and gender in your analytics.

- The subscribers count can also be extracted straight from the analytics. This allows you to find a topic that will result in overwhelming subscribers growth.

How to promote your YouTube videos using blogs and social media

Proper advertising for your YouTube videos can't be undermined as it gives your content the right publicity. With increasing social media presence, online advertising has never been this easy. With the right marketing skills, you can create massive awareness, promote your projects, send your video links to friends and have them over to your channel.

Here are the right tips to promote your YouTube videos on your social media accounts;

- Have a catchy YouTube thumbnail image as the first appearance on your video. This tells the viewers what your video is all about. A video on animal documentary that has a beautiful picture of a giraffe is catchy enough to tell the viewers you're more of an animal content creator.
- Make your title short and engaging as much as possible.
- Research keywords that bring the highest video result on Google. People are fond of searching contents with video links on Google, will it be out of place if your video comes out as priority on their search? Of course not.
- Ask your viewers to take action. You can tell them to watch more of your videos or click a certain link that can direct them to some other interesting stuff.
- Give license to people to share your videos on their blogs, post and social media. This gives you more exposure.
- Advertise and share your channel link on your social media platforms.

Steps to monetize your YouTube channel

One of the greatest motivations for man is financial incentives. Opening a YouTube is not always for the purpose of carrying out Community development services. There's always a motive behind it - might be money, popularity, advertising etc. That said, knowing the right way to monetize your YouTube channel is one thing you should never joke with as it can be frustrating after serious efforts, you don't get paid, all because of little errors that can initially be avoided.

YouTube in 2018 updated their latest requirements for monetization which include;

- Have at least 1000 subscribers on your channel.
- Have at least 4000 hours of watch time within the past year.
- Your channel must adhere to **YouTube partner program policies (YPP), YouTube terms of service, YouTube spam policies and community guidelines.**

Once it is certain that you complete the requirements above, the next thing is to apply for YouTube partner program. To earn money on YouTube, you need to apply and be verified for the YouTube partner program. After YouTube has accepted you, you can choose from any of the features below so you can start making your cash. The three most verified features by YouTubers include;

- Advertising revenue: Here, you can get your money through ads displayed from overlays and video ads. To choose this feature, you have to be at least 18years and be able to make creative content.
- Channel membership: You charge your members on a monthly or yearly basis to get access to some exclusive perks you offer. To choose this, you must be over 18years and have over 30,000 subscribers.
- YouTube premium revenue: Here, if any subscriber with a premium subscription fee watches your video, you get part of the revenue. To choose this, you must be able to create content watched by someone who's a YouTube premium subscriber.

YouTube will frequently review your channel to ensure it is in line with agreed policies. If your channel is not in line with agreed terms and conditions, your membership into YPP may be terminated abruptly. If your channel is terminated, you can reapply after 30days but ensure you follow agreed terms and conditions going forward.

Having followed all the agreed guidelines, you can then enable the monetization option in your YouTube account by following these simple steps;

- Click on the "my channel" icon at the top right-hand corner of your screen.
- Click on YouTube studio.
- In the YouTube studio, you'll see the channel menu on the left-hand side of your screen, click on the "other features" icon.

- Click monetization.
- Then click start.
- Go to the AdSense account and sign up.
- Once YouTube accepts your registration, they'll ask you to set your monetization preference.
- Wait for approval, which takes 30 days minimum.

Strategies to grow subscribers on YouTube

The YouTube space is so overwhelmed nowadays that you really have to prove yourself to breakthrough. Notwithstanding, there are tips if deployed will help cultivate an impression subscribers count on YouTube. Here are a few tips should you want to grow subscribers on YouTube platform;

- Use the end screen to your advantage: You can personalize your videos such that another video appears on the screen immediately the viewer finished the current one. This strategy works 90% of the time since most viewers will always want to see what is in the next video, thereby clicking it. Humans are naturally inquisitive.
- Quality videos over quantity: it is not by how many videos you can upload in a day, the quality of the content you're uploading actually matters. If you're always uploading many videos that lack creative content, you won't get subscribers on your channel.
- A large fan-base can result when you take your time to actively reply to every comment on your video. This shows the viewers that you have concerns for them and you are respectable. It might seem stressful at first, but it works.
- Use impressive but simple language to describe your video in the video description section. Some viewers like to read the video description first to see if it is worth their time. Let it be catchy.
- Trailer videos are the best opportunity to put your best foot forward.
- Create suspense in your video to keep people glued. People will always want to see what will happen next.
- Ask people to subscribe to your channel just after watching your video
- Keep your video as short as possible. People are bored easily with prolonged video hours.
- Let your Post be consistent as much as possible.
- Give incentives to viewers occasionally. This can be in forms of promo or

giveaway.

- Make sure your YouTube videos are searchable.

Benefits of live streaming on your YouTube channel

Live streaming is one sure way of growing your online community and presence. Through live streaming, YouTubers get to showcase their personal hustles and brands to their audience. This further builds a sense of unity between the YouTubers and their fans. With YouTube live platform, YouTubers can reach their followers in real-time. Things as simple as cooking favorite dishes can be showcased live by users and shared in real-time. YouTube live is fun and I'm sure it is something you just can't wait to experience. Here are the benefits you get to derive by going live on YouTube;

- You can monetize your live stream by creating exclusive live content that only people with a subscription can have access to in real-time.
- Your live video enhances your online presence, which implies more engagement for you.
- Live streaming has been easier and affordable, especially now than before.
